

Dylan LaMott | Location: Advance, NC

Experienced IAM Software Engineer III with a robust background in software development, specializing in Java and cloud-native solutions. Proven track record in leading end-to-end feature development, decommissioning legacy systems, and driving technical excellence across teams. Adept at aligning technical solutions with business goals to deliver high-impact results.

Skills: Java, Python, Beanshell, Go, AWS, JavaScript, MySQL, Node, Kubernetes, Terraform, Apache Kafka, Sailpoint IIQ, Docker, Spring, Jira, Agile Development, IAM, LDAP, Dynatrace, Splunk, Azure, Entra ID, Gradle, Management, Mentorship

Education

Guilford Technical Community College

Jamestown, NC

2020 — 2022

A.A.S. Computer Programming (GPA: 4.0)

Certifications

TestOut PC Pro

Aug 2020

Issued by: TestOut

Java Certification

Dec 2021

Issued by: Guilford Technical Community College

Computer Technology Integration Certificate

May 2021

Issued by: Guilford Technical Community College

Google AI Professional Certificate

Jul 2026

Issued by: Google | Credential ID: 5ALOAS5RFMFB

Work Experience

IAM Software Engineer III, Northwestern Mutual

Remote • Nov 2025 — Present

- Served on the hiring panel for engineer and leadership positions, evaluating candidates for IAM and technical expertise across all levels.
- Led a major database migration from AWS SQL Server to AWS Aurora MySQL, cutting the yearly database budget in half and saving \$70k.
- Automated inactivity detection for SailPoint IIQ identities, reducing the user license count by 60,000.
- Automated field rehire coordination across three teams, resolving a long-standing, major company-wide duplicate identity issue.
- Created company-wide Java and Node LDAP best practices via Docusaurus to guide teams on connecting with Active Directory.
- Automated developer tasks by creating agentic AI skills and provided multiple training sessions for less AI savvy IAM engineers.
- Optimized SailPoint user access management APIs by identifying and resolving inefficiencies, reducing average response time from 20 seconds to 1 second.

IAM Software Engineer II, Northwestern Mutual

Remote • May 2024 — Nov 2025

- Led the development of an automated application onboarding effort effectively pulling in 400 applications for automated

certification efforts.

- Decommissioned legacy services (MQ, IDM, on-prem solutions) and migrated workloads to AWS Kubernetes to enhance platform security and reliability.
- Integrated SailPoint IIQ with ServiceNow to streamline user access fulfillment within a unified identity platform.
- Led the development of technical interview standards, ensuring a consistent and thorough evaluation process. Assisted with interviewing and hiring multiple junior, mid, and senior level engineers.
- Established and enforced code review and merge review standards, improving code quality and team collaboration.
- Led DOP-related technical sessions to guide engineering teams on remediating security vulnerabilities, executing AWS upgrades, and modernizing CI/CD pipelines.
- Optimized directory microservice performance by resolving connection pooling issues, reducing average latency by 91% (from 3,181 ms to 267 ms).
- Expanded domain expertise through continuous training in Azure, AWS, Entra ID, Identity Administration, and CISSP concepts.
- Technologies used: AWS, Apache, Spring, Docker, Terraform, Node.js, Kubernetes, Java, Git, Gitlab, Gradle, CyberArk, MSK, Kafka, Kevlar, Cucumber, Dynatrace, SailPoint, Splunk, Slack, Kibana, OpenSearch, Python, ServiceNow, Azure

IAM Software Engineer, Northwestern Mutual

Remote • May 2022 — May 2024

- Architected and deployed a Spring Boot microservice provisioning 50,000+ users as the source of truth for SailPoint IIQ, building CI/CD pipelines to AWS Kubernetes and Terraform for AWS Aurora DB deployment.
- Developed Apache Kafka Spring Boot consumer microservices to migrate business event processing away from legacy MQ infrastructure, enabling real-time access provisioning.
- Customized SailPoint IIQ across custom application definitions, provisioning rules, birthright entitlements, lifecycle workflows, and access certifications.
- Served as SME for key IGA applications, leading incident resolution, performance tuning, system governance, and cross-team knowledge transfers.
- Engineered a RESTful Spring Boot LDAP service handling thousands of requests per minute for 70+ client teams, utilizing HPA in Kubernetes to scale dynamically while safeguarding directory access.
- Implemented integrated alert pipelines connecting Slack, ELK, and ServiceNow for automated incident creation and real-time error tracking.
- Built an automated GitLab/Renovate bot to perform nightly dependency scans across code repositories, automating update PR generation and maintaining security compliance.

Production Planner 1, Brakebush

Remote • June 2021 — May 2022

- Managed product inventories and analyzed sales data to drive strategic business planning across three manufacturing facilities.
- Partnered with executive leadership to establish nationwide production schedules aligned with demand forecasts.
- Coordinated across logistics, procurement, and sales to balance supply chain inventories and optimize throughput.
- Provided daily operational contingency planning for manufacturing plants during component, machinery, or material supply disruptions.

- Delivered daily inventory evaluations, facility analytics, and production projections to executive leadership.
- Directed operational planning for a primary facility producing millions of pounds in annual output.

Production Lead, Brakebush

On-site • August 2019 — June 2021

- Supervised 80+ team members, directing shift operations and ensuring adherence to efficiency and quality standards.
- Architected and executed daily operational strategies to fulfill throughput targets.
- Facilitated onboarding and technical skills development programs for incoming shift personnel.
- Established structured training workflows to drive team career progression and technical competency.
- Promoted to corporate Production Planner role following track record of process optimization and operational leadership.

Manager, Tar Heel Capital

Mocksville, NC • May 2015 — August 2019

- Oversaw nightly operations of the store and ensured business standards were followed.
- Directed onboarding and continuous training programs for staff.
- Earned top performance recognition out of 84 franchise locations, earning a promotion to Training Manager.

Open-Source Contributions

QuestDB: An open-source time-series database used by Yahoo, Turkcell, and high-frequency trading systems.
Website: <https://questdb.io/>

Contribution 1: Merged Pull Request — <https://github.com/questdb/questdb/pull/1909>

- Resolved long numeric overflow bug when utilizing nanoseconds for thread latch wait times by refactoring method invocations and data comparisons.

Contribution 2: Merged Pull Request — <https://github.com/questdb/questdb/pull/1998>

- Designed a strongly typed enum structure replacing 300+ lines of error-prone string literals used in server configuration file initialization.
